

ABSTRACT OF THE INVENTION

A trunk space storage system for motor vehicles comprising a hinge, a frame, and a storage pouch. This trunk space storage system allows users who cannot easily bend over to pick up or place objects into deep trunk spaces, such as the elderly or those with physical impairments, to have access of the objects placed into the trunk without having them roll back into the deep trunk space. This invention also provides for easy deployment and stowing with little strain on the body for those users who may suffer from physical limitations.
